

Business Science

Models and methods for solving complex business problems.

Programme level	Graduate, Postgraduate	Duration	12 weeks
Credits	3	Delivery	Classroom, Hybrid
Subject area	Business Science	Updated	2026-07-21

Course overview

An interdisciplinary course combining business understanding, analytical methods, experimentation and systems thinking to address complex organisational problems.

Intended audience: Students and professionals seeking an integrated approach to business problems that cross functions, data and organisational systems.

Prerequisites: Introductory business statistics or equivalent experience is helpful.

Learning outcomes

- Diagnose complex business problems using structured inquiry.
- Combine quantitative and qualitative evidence.
- Design experiments and evaluate managerial interventions.
- Model interactions across business functions and systems.
- Translate findings into feasible organisational action.

Module structure

01	Business science as an integrated discipline Problem contexts, evidence and model-based reasoning.
02	Causal questions and experimentation Experiments, natural experiments and practical limitations.
03	Systems and stakeholder analysis Interdependencies, feedback and organisational behaviour.
04	Decision models under uncertainty Scenarios, trade-offs and robust choices.
05	From evidence to implementation Recommendations, adoption and evaluation.

Assessment pattern

Assessment component	Weight
Problem diagnosis brief	25%
Experiment design assignment	30%
Integrated business science project	45%

Delivery note

The module sequence, class activities and assessment details may be adapted for programme schedules, cohort experience and institutional requirements. The course remains focused on practical application, structured judgement and professional communication.
